

Project Plan

Enhancing/ Amenities Team 3

Project client name (client contact person)	Ross Ashby Senior Project Manager
Client workplace	Hamilton City Council
Client workplace location	Hamilton (Kirikiriroa)
Client contact details (email, phone)	Ross.Ashby@hcc.govt.nz

Title of your proposed group project <i>The title needs to accurately reflect the proposal's intent.</i>
Boyes Park Redevelopment: Safety, Enhancement & Amenities
Who are the members of your group, their discipline, student ID, etc.
• Tiana Kingi, Psychology & Sociology Major, Student ID: 1636408 • Caitlin Bird, Psychology & Forensic Psychology, Student ID: 1635570 • Min Soe Htut, Computer Science, Student ID: 1631938 • Patrick Day, Digital Business, Student ID: 1614002
Describe the purpose of your client's business/organisation. Approximately 150 words.
Hamilton City Council is the territorial local authority responsible for governing Hamilton (Kirikiriroa) in New Zealand. Its primary role is to manage and deliver essential services and facilities for city residents, their businesses, and visitors, primarily supporting and delivering core services such as public transportation, water supply, waste management, parks and recreation, libraries, cultural facilities, and urban development. Hamilton City Council operates under a vision of shaping a city that is easy to live and thrive and where sustainability and enhancement are prioritized. The council is committed to creating a vibrant and environmentally friendly city. Hamilton City Council also engages with the community to ensure that its projects align with the needs of the residence.

Hamilton City Council includes improving public transport, enhancing green spaces, fostering economic development and supporting cultural heritage. Through strategic planning and community engagement, Hamilton City Council aims to make Hamilton a highly liveable metropolitan area with sustainable growth and development.

Describe the project. Approximately 500 words

What is required, what is the problem/purpose being addressed, why is this important, what would happen or not happen if this project is not completed. Is this project part of a bigger piece of work, how does it fit?

Our project focuses on enhancing the facilities at Boyes Park to make it a safer and more accessible and inclusive space that can be used by everyone of all ages, all abilities, and backgrounds. The park is a valuable community asset and it is our aim to fully address the diverse needs of all those residents. Boyes Park is being redeveloped so that it can become a multipurpose park where people can go to play, recreate, and socially interact. Our team's focus is on improving the park's amenities to ensure that it serves the community effectively and inclusively.

The redevelopment of Boyes Park will form part of the wider efforts by Hamilton City Council aimed at improving public spaces, which will be in line with Sustainable Development Goal that focuses attention on safe, inclusive, and green spaces for all of the residents. The Hamilton City Council has detailed staged plans for the redevelopment of the park with:

Stage 1: Enabling works and planning

Stage 2: Demolition works and detailed park design

Stage 3: Development of multi-purpose park

Our role in this is to assess and propose enhancements in park facilities to meet the diverse community needs.

The problem we are addressing is the current state of amenities within Boyes Park, as they may not fully accommodate the wide range of residents, especially as the park undergoes redevelopment. The public park should be a place where people feel safe, comfortable, and inspired to take part in outdoor activities. However, if pathways, seats, lights, toilets and other recreational amenities are not designed inclusively, these may pose as a limit to accessibility and usability for certain groups, including elderly individuals, people with disabilities, families with young children, and others with specific needs.

The importance of this project lies in the part that public spaces play in community well-being. A well-designed park will induce social interaction, encourage physical activity, and help mental health. If this project would not be completed, then some valuable insights on accessibility and enhancement would be missed. This results in a park that also fails in meeting the total needs of the community. Without these improvements, some individuals would find the park quite a challenge to navigate even unsafe and unwelcoming. Neglecting to enhance amenities would be a missed opportunity in giving back to Hamilton City.

Our project is a key piece in the larger puzzle of making Boyes Park a well-utilized and functional urban park. It connects with Hamilton City's vision of shaping a city that is easy to live in and where people thrive. We contribute to a long-term vision that improves accessibility, safety and community engagement. This project will provide insights and concept plans that can help the Hamilton City Council ensure that Boyes Park becomes a model urban park.

Provide a week-by-week schedule for completing this project

Week 1:

- Organise an effective communication plan within the group.
- Complete the Project Plan

Week 2:

- Visit Boyes park collectively/individually to assess current facilities, layout, and overall state of the park (identify any concerns, highlight potential and space for additional developments/improvements).
- Start preliminary research, (reading articles, community reports for Boye's park or similar parks within New Zealand).

Week 3:

- Continue preliminary research
- Analyse notes taken from Boyes Park visit. Prioritise areas/facilities to focus on improving.
- Finalise survey /interview design (if applicable) and begin data collection.

Week 4:

- Analyse responses from survey/interview, create chart or graph to visually report results
- Plan in detail the additions and improvements we will propose for Boyes Park based on survey results and data collection (We may not be able to include all of our ideas due to budgeting and space issues, therefore we will have to prioritise certain additions over others.)

Week 5:

- Create a basic sketch of our vision for redeveloped park, brain storm report on a shared google doc.

Week 6:

- Start planning the group poster presentation

Week 7:

- Complete poster, allocate parts for the presentation and practice as a group

Week 8:

- Discuss and assign tasks for the final report (who will write which sections)

Week 9:

- Start a draft for the final report

Week 10:

- Continue writing the report

Week 11:

- Go over the final report with the group, make sure all components of the report align with the project's goals.
- Submit the project report.

Weekly updates will be recorded and team check ins will also occur each week to ensure we stay on track.

Are you completing primary research?

If so, list expected research activities and their timeline

- Survey (Completed and sent out by beginning of Week 3)
- Assessment of facilities (Group members would go to Boyes Park and evaluate the existing facilities, write brief report and share to Google Doc)
- Safety Evaluation (Go to Boyes Park and sight safety hazards that we think can be improved, write brief report and share to Google Doc)

What are your key objectives? Approximately 200 words.

Our key objectives are to make a project plan for the Boyes park that attempts to accommodate everyone. The park is a community space so therefore the amenities should be inclusive to all people in the community. This means taking extra consideration in making sure the park has areas/amenities that can be multi-use for a wide variety of people whilst remaining safe, functional and practical.

Some of our ideas are:

- Open grass area for relaxation, sports, and community gatherings.
- Accessible toilets, including disabled and gender-neutral facilities.
- Modern, inclusive playground with sensory play equipment.
- Drinking water fountains with bottle refill stations.
- Well-lit pathways and streetlights to improve safety and visibility.
- Picnic tables, benches, and seating areas for relaxation and social interaction.
- Shade structures and sheltered seating for sun and rain protection.
- Bicycle racks and scooter parking areas to encourage active transport.
- Rubbish bins and recycling stations to promote cleanliness.
- Fitness stations or outdoor gym equipment for all age groups.
- BBQ and communal cooking areas for community gatherings.
- Public art installations and murals to celebrate local culture and history.
- Sensory gardens with native plants to support mental well-being and biodiversity.
- Dog-friendly zones and waste stations for pet owners.
- Signage with maps and historical information for accessibility and education.

Safety and inclusivity are central, with non-slip, wheelchair-friendly pathways, multi-language signage, and quiet zones for sensory-sensitive visitors. By integrating these elements, we aim to create a functional, welcoming park that benefits the entire community and aligns with sustainability goals.

List any additional support you may require including documentation

- Budget plan for amenities
- Access to research resources such as community reports/articles,
- Access to site plans and maps of the park, including current layouts and zoning information
- Guidelines for public amenities (e.g. playgrounds, seating areas, lighting) to ensure compliance with local regulations
- Safety reports or incident data to identify areas of concern and guide safety improvements
- Community feedback or survey data to understand public needs and priorities
- Consultation sessions with local authorities, planners, and community representatives for project alignment

Briefly describe your team's skill set and how these skills will be matched with the project outputs? E.g. what degree specific learning and or employability skills will be utilised? Critical thinking, marketing, analytics, project management etc.

Tiana: Psychology/Sociology degree would be beneficial as it gives me knowledge into human behavior, social structures, and community dynamics. From a sociology perspective, understanding how different social groups interact with public spaces can provide insight into planning a park for the community of Hamilton. Working at a swim school with children would also help me in this project as our pool has to be inclusive for those with disabilities, children/teenagers and adults. This gives me experience with adjusting my output in consideration of people from a wide range of ages and abilities.

Caitlin: Psychology/ Forensic psychology degree. My background in psychology has equipped me with strong research, statistical analysis and critical thinking skills. This will allow me to approach this project from an evidence-based perspective. My minor in forensics will be specifically useful in providing insight into how ecological spaces can influence crime, allowing me to contribute to designing a park that promotes safety by attracting pro-social people and discouraging anti-social behaviour. I will also utilise my understanding of human behaviour to predict who/ how they will use the park and develop strategies to attract the target demographic.

Patrick: Digital business/ Marketing degree. This degree will help with this project as the marketing side of it will help with letting the community know what is happening to the park and surrounding area, as well as providing information and a date on when the project will be completed and available to the community. There are also some skills to do with project management which will also be beneficial to the project.

Min Soe Htut: Computer Science Major. My background equipped me with strong analytical, problem-solving, technical skills and planning. My ability to analyse data , use digital tools and apply logical reasoning will be valuable in assessing the accessibility, usability and community

engagement strategies for Boyes Park. I can contribute to the project by utilizing technology to create visual concept plans, assist with data collection & analysis and explore digital solutions such as interactive maps or online surveys to gather feedback. Additionally I have experience in building engineering that will help me with understanding of structural planning and design. While I am not focusing on my engineering experience, the skills I have gained in structured thinking and practical assessment will allow me to contribute to the planning and completion of this project.

When this project is completed, the possible benefits will be?

When this project is completed there will be multiple immediate and long term benefits, such as

- Well researched information that can be used by Ross when re-developing Boyes Park
- Project members will have gained experience in coordinating a group project
- Project members will have also gained experience in project planning and designing
- This project will facilitate ideas that can benefit the community through the ideas provided to help update Boyes Park
- This project will contribute to the wellbeing of society and the environment by providing a green space that encourages local citizens to spend time in and care about the environment.

What challenges will there be that will make this project difficult to complete or likely make this plan not feasible. Please do not just state time limit as this is the case for all projects

This project aims to enhance Boyes Park by making it safer, more accessible, and inclusive for all. As university students, we are developing a project plan that suggests improvements and amenities to create a welcoming and functional space. However, designing a fully inclusive park may not be entirely feasible due to budget, space, and other limitations. Because of this we will have to prioritise the elements of our project plan that may have the most significant positive impact on the environmental space and the majority of locals. Consequently, some groups may feel overlooked, even though this is not the intention. Additionally, as a student-led project, coordinating schedules for collaboration presents a challenge, as does designing a park without prior experience in urban planning. Despite these difficulties, completing this project is essential as it will contribute valuable insights and recommendations for making Boyes Park an inclusive, community-driven public facility. This project also forms part of a broader effort to improve public parks so that they serve the diverse needs of a diverse community.
