A BETTER BOYES PARK

ENHANCING AMENITIES TEAM 3

[Enhancing Amenities Team 3 website](#)

AIM

Enhance amenities, accessibility & the safety of Boyes Park to meet diverse community needs

Key improvements include:

- Upgraded walking and biking tracks
- Additional seating, lighting, rubbish bins, and drinking fountains
- Accessible restrooms
- Inclusive features like splash pads and accessible car parking
- Support active transport with bicycle racks
- Promote social engagement with shared BBQ and cooking areas
- Refurbish the historic water fountain to preserve cultural significance and improve functionality

Overall goal: create a more functional, inclusive, safe, and welcoming park for all visitors

SAFETY BY DESIGN

Why safety matters in public parks:

- A sense of safety promotes park use & community wellbeing. Perceived risks can deter visitors, specifically older, more vulnerable groups.

How can we promote safety in public parks?

- One proven method is **Crime Prevention Through Environmental Design (CPTED)** (Thani et al., 2016)
- We applied CPTED principles to inform our design for Boyes park by implementing:
 - **1) Natural surveillance** : open spaces, upgraded lighting etc.
 - **2) Maintenance**: improving the upkeep of the park, adding rubbish bins and refurbishing the water fountain etc.
 - **3) Territorial Reinforcement**: BBQ area & splash pad are clear community owned areas to encourage shared responsibility.
 - **4) Access control**: clear entryways and exits.

METHODOLOGY

- We conducted multiple onsite assessments of the park’s needs and limitations.
- Photos were taken of existing facilities playgrounds, seating areas, and pathways, with condition issues such as surface cracking and drainage pooling noted.
- This hands on research was supported by academic articles about the benefits of adding certain infrastructure (e.g toilets, water fountains, etc.)
- After conducting this research, findings were compiled into a report with phased, practical recommendations ranging from small accessibility upgrades to longer-term eco-friendly improvements, ensuring Boyes Park evolves in a way that is inclusive, environmentally responsible, and aligns with Hamilton City Council’s vision.

DIGITAL ENGAGEMENT STRATEGY

We created a visual map and interactive website to make the Boyes Park proposal accessible and engaging. These tools help the community explore redeveloped and share feedback to guide future development.

- **Site Map**

A clear **site map** uses intuitive icons to highlight key upgrades like inclusive play areas, lighting, seating, and water stations.

- **Website**

Scan the **QR code** to explore the project in depth, learn about our team and project aim and background

- **Community Interaction**

Visitors can submit **feedback** and **booking** enquiries ensuring the community’s voice helps shape Boyes Park’s future.

PROPOSED DEVELOPMENT MAP
